

# ELECTRIC WATER HEATING DELUX STAINLESS STEEL

Vented/Unvented

Multifunction Installation Options

The DeXpro Delux stainless steel water heater is ideal for use in light commercial applications such as, offices, shops, factories, schools/universities, hospitals, modular buildings or domestic applications often when there is no gas supply.

**Built to last** The Delux Stainless Steel water heater has a stainless steel tank which is far more rust and corrosion resistant than standard glass lined steel tanks.

**Multifunctional use** The Delux stainless steel can either be installed as an unvented system where it can supply 1-2 basins at high flow rates using mains pressure or a Vented system to supply a single sink using a vented tap.

- 10 Litre storage capacity
- 2.0kW Element for rapid heat up
- Stainless steel tank
- High density insulation CFC FREE polyurethane
- Empty heat up and overheat protection
- Manually re-settable thermal cut out
- Floor standing or wall mounted
- 5 Thermostat setting modes including economy & frost protection
- 3/8 inlet / outlet connections
- Multifunction installation options - Unvented using Expansion Kit DXUKIT1 or vented system using vented tap DXUVTAP
- Supplied with 1/2 inch brass connection adaptors
- Cable pre-wired
- Max. working temperature 65°C
- Brass safety pressure relief valve supplied

### KEY FEATURES

ERP Energy ratings: **A**

The accessory kit DXUKIT1 may be required depending on where the appliance is installed. The supplied 6 bar pressure relief valve must be installed and plumbed to the nearest external drain. Refer to the unvented diagrams on page 8.

### Choosing A System

#### UNVENTED Mains pressure to supply 1-2 sinks, delivering high flow rates.

The accessory kit DXUKIT1 would be required if installing the unit within 2.8 metres of the sink and the 6 bar pressure relief valve must be installed and plumbed to the nearest external drain. Refer to the unvented diagrams on page 8.

#### VENTED Hot water supply to a single sink only using a vented tap (DXUVTAP)

Easier to install and no expansion accessories required, ideal when installing in a area where there is no external drain that an unvented system requires.
